

Security Program Development

Network Computing Architects, Inc.

Develop a comprehensive and flexible security program to reduce your risks, enforce corporate policies and meet your compliance requirements.

- Do you have legal and regulatory compliance requirements such as PCI-DSS, GLBA, Sarbanes-Oxley or HIPAA?
- Do you fully understand the risk to your organization if you were to experience a security breach and you're not compliant?
- Are you faced with staff cuts or other resource constraints making it a challenge to develop your security program?

Network Computing Architects Inc. (NCA) can help!

We offer an annual subscription security bundle that includes the core components required for the majority of compliance requirements providing you with a security program that will address your security and compliance requirements.

What are the Benefits of NCA's Security Program Development Service?

- **Eliminates the need to dedicate internal resources** to develop and maintain security policy and standards.
- **Meets Regulatory Compliance Requirements** for SOX, PCI-DSS, HIPAA, GLBA, ISO 27001:2005 and others with minimal cost.
- Provides a **"one-stop" security portal** for training and policy documents.
- Reduces costs by outsourcing security awareness training and Information Security Policy, Standard and Procedure development to industry experts.

Security Program Development

Subscribing to **NCA's yearly Security Program Development Service** will provide your organization with web-based end-user information security awareness training courses and management reporting.

NCA's annual Security Program Development service provides a "one-stop" Information Security portal that includes:

- Corporate Information Security Policy
- Acceptable Use Policy Statement
- Security Standards
- Security Procedures
- Security Awareness Training Courses
- Quarterly Compliance Reports
- NCA Security Consulting hours
(to be leveraged for Information Security policy, standards & procedures customization)

NCA, founded in 1992, is a West coast provider of Information Security, Convergence and Telephony product and service solutions. NCA specializes in information security management and acts as an ISO 27001:2005 associate consultant for the British Standards Institute developing Information Security Management Systems for our clients.

Some of NCA's additional services include; Asset Identification, Risk Analysis, Vulnerability Assessments, Security Program Development, Penetration Testing, Security Architecture and Implementation Services for controls such as firewalls, VPN's, SIEM's, encryption, IPS, Web and Mail gateways.
